The Entry Clearance Officer,

UK Visas and Immigration, [Name of the British Embassy/High Commission]

[Address of the Embassy/High Commission]

Subject: Statement of Purpose for Student VISA Application

Dear Sir/Madam,

I am Angal Hemanth Reddy, and my passport number is V1606366. I am writing to present my application to study a Master of Science in Data Science at the University of Roehampton in London, for which I have received an **unconditional** offer of admission. This statement will summarize my educational experience, reasons, and intentions, thus indicating my genuine interest in becoming a hardworking student who abides by all the UK immigration regulations.

I have so far been driven and taught primarily through an unwavering enthusiasm to find stories behind data. This intrinsic interest was the one that led me to study a bachelor's degree in BSc in MPCS (Mathematics, Physics, and Computer Science) **at Hindi Mahavidyalaya College in Hyderabad**. This kind of combination of majors has provided me with a great interdisciplinary background. My Mathematics training has given me the necessary skills in statistical and probabilistic reasoning; training in Physics has given me the skills in modelling complex systems; training in Computer Science has given me the skills and knowledge of programming and algorithms to implement such models. The above three fields have been found by me to be most useful in the field of data science in real-world problems.

The academic project that I worked on in number theory was a highlight of my education. As a challenge to the intellect, I was fascinated with the idea of applying this interdisciplinary knowledge to real-world data situations, especially the abstract concepts of mathematics to

computational logic. This project made me inclined towards learning beyond the class, which is why I was interested in attending online webinars and workshops in order to remain updated about industry developments and trends.

My uniqueness is not only my technical knowledge but also my commitment towards individual growth as well as social welfare. My experience while volunteering for this college's annual medical health camps in 2024 and 2023 was extremely enlightening. In the period of time that I managed to work with the registrations and records, I noticed the power of scientific collection and adequate analysis of information to improve health outcomes in a community. Such an experience pushed me no longer to think about abstract datasets, but rather to focus on the real human stories behind them. The sports experience also instilled in me a great sense of discipline and teamwork.

My long-term objective is to emerge as a technology leader in data science, creating sustainable and cost-effective model solutions for industries like healthcare, energy, and rural automation. I am convinced that the research-oriented and interdisciplinary atmosphere at the University of Roehampton, combined with access to esteemed faculty and modern laboratories, will create the ideal environment for me to achieve this ambition.

In conclusion, I present a well-rounded profile marked by academic excellence, practical Data science experience, a commitment to continuous learning, and a strong sense of social responsibility. I am excited about the possibility of joining the Data Science program and contributing to the university's dynamic and diverse academic community.

Thank you for considering my application.

Warm regards,

Angal Hemanth Reddy
